How to take HDR photograph - Post Processing:
1- Merge files into single 32-bit HDR file
2- Tone-map the file in 16 or 8 bit format
Merge files into single 32-bit HDR file
In Photoshop:
- File => Automate => Merge to HDR
- Browse files or folders and choose photos with different exposures,
- If necessary choose "Automatically Align" option,
- Click OK.
In Photomatix:
- HDR => Generate
- Browse and choose photos and click OK
- Choose between available options if necessary such as Align Source Images, Reduce Ghosting…
- Click Ok
Then;
Tone-up the file in 16 or 8 bit format:
In Photoshop:
1- Image>Mode
2- Choose between 16 or 8 bits
3- Choose between available methods (Preferably "Local Application" and agjust the setting and click OK
4- "Save as" the file
In Photomatix:
1- HDR>Tone Mapping
2- Adjust the setting and click apply
3- "Save as" the file,
You're done!
